DETAILED ACTION

Response to Amendment

- The remarks and amendment filed on June 9, 2006 have been entered and fully considered.
- 2. Claims 1-5 are presented.
 - a. Claims 1-5 are amended.
- 3. The 102(b) rejections for claims 1-5 are withdrawn.

Response to Arguments

4. Applicant's arguments, see pages 4-5, filed 06/09/2006, with respect to the rejection(s) of claim(s) 1-5 under 102(b) have been fully considered and are persuasive. Therefore, the rejections have been withdrawn. However, upon further consideration, a new ground of rejection is made herein.

Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Takechi et al., U.S. Patent No. 6,200,725 B1 in view of Meador et al., U.S. Patent No. 6,156,479.

Takechi teaches a chemically amplified resist composition comprising a filmforming polymer and a photoacid generator (col. 26, lines 10-60). The film-forming Application/Control Number: 10/523,523

Art Unit: 1752

polymer comprises the same vinyl polymer repeating unit as claimed in Formula I of instant claim 1, wherein Z is oxygen (see formulas XXIV-XXVI of col. 26 and col. 10, line 20 for Z). Takechi also teaches the molecular weight of the film-forming polymer is 2,000 to 1,000,000 (col. 19, line 53). Takechi does not teach a sensitizing dye in the resist composition.

However, Meador teaches an anti-reflective coating composition comprising a methacrylate polymer and a protonic acid catalyst (col. 3, lines 49-62). The composition also comprises a light-absorbing dye (col. 5, line 12). The dye and acid catalyst are are present in an amount of 2.5-10% by weight (col. 6, lines 60-62). It would have been obvious to add the light-absorbing dye of Meador to the composition of Takechi to increase sensitivity of the composition as taught by Takechi (col. 4, lines 42-44).

Conclusion

- 7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
- 8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Connie P. Johnson whose telephone number is 571-272-7758. The examiner can normally be reached on 7:30am-4:00pm Monday thru Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Cynthia Kelly can be reached on 571-272-1526. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
